Project Name	AI FitTrack API
Maximum Marks	3 Marks

Project Executable Files

This section covers the executable and deployable files required for the AI FitTrack API. The evaluator can run the solution locally using the files and instructions provided below.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	NA

Note: "NA" indicates the item is not required for an API-only project.

Step 2: File / Folder Structure

Overview of the project file and folder structure:

Path / File	Purpose
AI-FitTrack-API/	Root project directory
server.js	Starts the Express server and registers middleware/routes
routes/	REST API route definitions
controllers/	Request-handling and business-logic functions
models/	MongoDB / Mongoose data models
middleware/	Authentication, validation and centralized error handling
config/	Database and application configuration
tests/	API and functional test files
package.json	Project metadata, scripts and Node.js dependencies
.env.example	Example environment-variable configuration
README.md	Project description, setup and execution instructions

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not deployed / Local evaluation
Login Credentials (Demo)	Register a demo user via the register endpoint for evaluator access
Platform / Hosting Provider	Local Node.js / Express environment; cloud hosting can be added later
Repository Link	To be added - GitHub / GitLab repository URL
Demo Video Link	Not applicable

Step 4: Run Instructions

Pre-requisites:

Node.js (LTS) and npm, MongoDB (local or Atlas), Visual Studio Code, Postman.

Step 1: Open the AI FitTrack API folder in Visual Studio Code (or clone: git clone <url>).

Step 2: Open a terminal in the project root directory.

Step 3: Install dependencies: npm install

Step 4: Create a .env file from .env.example and set PORT, MONGO_URI and JWT_SECRET.

Step 5: Make sure the MongoDB service is running and the connection string is correct.

Step 6: Start the application: npm start (or node server.js).

Step 7: Use Postman to test the endpoints at http://localhost:PORT.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Repository URL is not included in this submission.	Add the actual GitHub / GitLab URL before final submission.
2	Not deployed; documented as a local API solution.	Run locally, or add the hosted URL and provider when deployed.
3	Environment values depend on the evaluator's local setup.	Configure the .env values and MongoDB connection before running.
